

Entity Framework Core 8. 0

Lab 2: Setting Up the Database Context for a Retail Store

Scenario:

The retail store wants to store product and category data in SQL Server.

Objective:

Configure DbContext and connect to SQL Server

1. Models :

Category.cs :

Product.cs :

2. Create ApplicationDbContext:

[AppDbContext.cs](#) :

```
File Edit Selection View Go Run Terminal Help
RetailInventory
AppDbContext.cs X Program.cs
Data > AppDbContext.cs > {} RetailInventory.Data > AppDbContext > Categories : DbSet<Category>
1 using Microsoft.EntityFrameworkCore;
2 using RetailInventory.Models;
3
4 namespace RetailInventory.Data
5 {
6     public class ApplicationDbContext : DbContext
7     {
8         public DbSet<Product> Products { get; set; }
9
10        public DbSet<Category> Categories { get; set; }
11
12        protected override void OnConfiguring(DbContextOptionsBuilder optionsBuilder)
13        {
14            optionsBuilder.UseSqlServer(
15                "Server=localhost;Database=RetailInventoryDb;Trusted_Connection=True;TrustServerCertificate=True;");
16        }
17    }
18 }
```
