

Entity Framework Core 8.0

Lab 5: Retrieving Data from the Database

Scenario:

The store wants to display product details on the dashboard.

Objective:

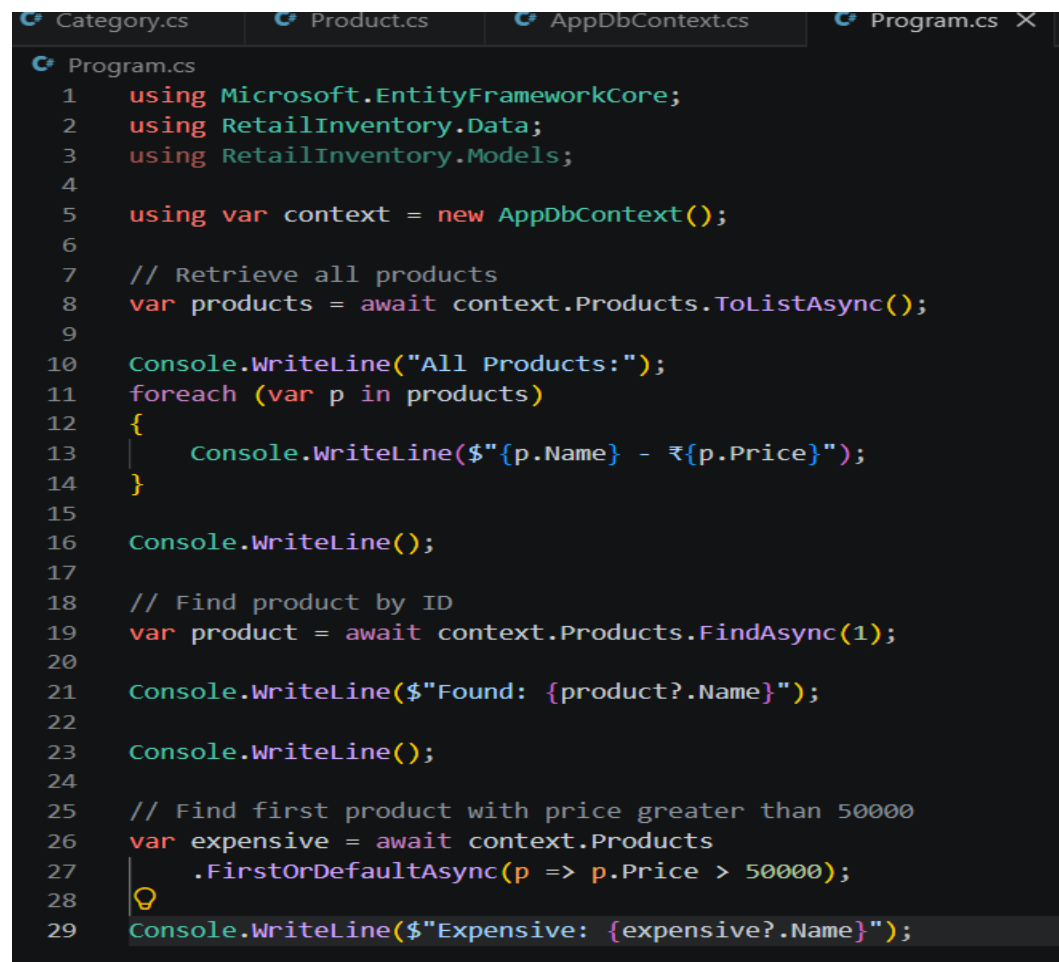

Use Find, FirstOrDefault, and ToListAsync to retrieve data.

1. Retrieve All Products:

2. Find by ID :

3. FirstOrDefault with Condition:

Program.cs:

A screenshot of a Visual Studio code editor window. The top of the window shows four tabs: 'Category.cs', 'Product.cs', 'AppDbContext.cs', and 'Program.cs'. The 'Program.cs' tab is active and shows the following C# code:

```
1  using Microsoft.EntityFrameworkCore;
2  using RetailInventory.Data;
3  using RetailInventory.Models;
4
5  using var context = new AppDbContext();
6
7  // Retrieve all products
8  var products = await context.Products.ToListAsync();
9
10 Console.WriteLine("All Products:");
11 foreach (var p in products)
12 {
13     Console.WriteLine($"{p.Name} - ₹{p.Price}");
14 }
15
16 Console.WriteLine();
17
18 // Find product by ID
19 var product = await context.Products.FindAsync(1);
20
21 Console.WriteLine($"Found: {product?.Name}");
22
23 Console.WriteLine();
24
25 // Find first product with price greater than 50000
26 var expensive = await context.Products
27     .FirstOrDefaultAsync(p => p.Price > 50000);
28
29 Console.WriteLine($"Expensive: {expensive?.Name}");
```

OUTPUT :

```
PS C:\Users\laksh\RetailInventory> dotnet run
C:\Users\laksh\RetailInventory\Models\Product.cs
constructor. Consider adding the 'required' modifier.
C:\Users\laksh\RetailInventory\Models\Product.cs
ting constructor. Consider adding the 'required' modifier.
C:\Users\laksh\RetailInventory\Models\Category.cs
constructor. Consider adding the 'required' modifier.
All Products:
Laptop - ₹75000.00
Rice Bag - ₹1200.00

Found: Laptop

Expensive: Laptop
PS C:\Users\laksh\RetailInventory>
```
